INTRODUCTIONS OF J. R. & C. T. LARUS

BLUE DEVIL

Description of Blue Devil and Leah Gorham are from the Introducers. Leah Gorham was purchased by them from Leah Gorham of Utah, and is the only seedling purchased by them for Introduction. Don't let the low price fool you as I am sure it is a real outstanding Glad.

BLUE DEVIL is a clear deep violet with a rose blotch on a conspicuous white throat — entirely different in appearance than any other glad we have seen. It grows to a height of 60" with a tall strong stem that does not crook or fall over. The flowerhead is from 24" to 27" long with 18 to 21 buds and 7 open. The 4½ inch florets open flat, are strongly attached and well placed. Propagation and germination are excellent and bulblets frequently bloom. A strong, healthy grower.

BLUE DEVIL has won in the blue classes whenever shown. It made a clean sweep of the 478 class both days at the 1950 Connecticut Show. Its record includes.

1950 Award of Merit & Best seedling Connecticut	1950
"A" Rating Eastern International Show	1950
Award of Merit New England Glad Show	1950

Most Popular Variety in the show by vote of the public. Received as many votes as the next 3 varieties combined.

Prices for 1950-1951 Large \$5.00 Medium \$4.00 Small \$3.00 Bulblets \$1.00.

LEAH GORHAM (American Commander X Liberator)

Under seedling number 41852 this variety was approved by the N.A.G.C. Trail Garden after a two year test. The 4¾" florets, which are light red with a clean white throat, are striking and very attractive. They are strongly attached to a 26 to 28 inch flowerhead. Of the 18-22 buds, 5 to 7 open in excellent placement. The florets are lightly ruffled and of medium heavy substance. The color is bright and clear with no flecking. Spikes are strong and no crooking has been reported.

Propagation is good and bulbets grow well. Spikes from medium bulbs were almost the same as from large. The variety is healthy and an easy grower.

Prices for 1951 Large \$1.00 Medium 75¢ Small 50¢ Bulblets 2-25¢

PARADE is the earliest purple variety yet introduced. The color is very lively and appealing and does not burn in the sun, nor has Parade ever produced a crooked spike. Bulblet production and germination are excellent.

FROM MARION C. RICH

BONNIE LASS Originated by Marion C. Rich

(Picardy x Damaris) X (Highland Chief Seedling) 466 Class. 85 days to bloom.

BONNIE LASS is very clean, pure orchid lavender, with a white blotch diffused into lavender on a single lip petal. Midribs are lighter and slightly raised or creased. Petals have frilled wavy edges and are of good texture. Attachment is good, facing and spacing excellent. The stalk is slender, but very strong and always straight. It opens very well in water when cut in bud, holds its size to tip, and blooms well from any size bulb. Very healthy, and quite prolific, and good germination of bulblets. The growth is up to 60" tall, 25" flowerhead, 4½" to 5" blooms, 20 buds and opens up to 8. Will make a fine show flower, and an excellent commercial.

RECENT INTRODUCTIONS OF BIRCHVILLE GARDENS WITH SPECIAL UNIT PRICES.

SUNDAY BEST (Pletcher 1950)

We predict a wonderful future for this outstanding commercial. A beautiful, clear, light lavender, with a rose color blending into a deep cream throat. Opens 6 to 8 well-placed blooms on a 25 to 30 inch flowerhead with tall spikes. Sunday Best has very good bloom attachment and is a good shipper. Unusually healthy and vigorous with heavy propagation and germination. A wonderful grower from all size bulbs; this past season we cut good spikes from No. 5 bulbs. As a grower, will you be on the band wagon and grow SUNDAY BEST in 1951?

At the shows it will be consistent winner, having won the American Home Achievement Medal and best seedling, also winner in its color class many times. In 1949, SUNDAY BEST received the second highest score (84½) at the Rhode Island G. S. Trial Garden.

ROBERT ALAN (Lorenz 49)

None More Beautiful! None More Dependable!

A wonderful brilliant, waxy, golden yellow, with no markings. The color is always pure and clean. It grows 55 to 60 inches tall and has 20 to 22 buds with 8 open. The large 5½ inch florets are well placed on a long flowerhead. The plant has a rich glossy foliage with broad leaf. We consider ROBERT ALAN the finest clear yellow. Compared with any present yellow, ROBERT ALAN will prove first in quality, beauty and performance. At its first showing in 1946 as a seedling, offers of \$100.00 per bulblet were refused by the originator. A good producer of bulblets that grow unusually well, making fair sized bulbs. As far as I know, this is the only glad receiving a 100% AA rating (Very superior) to date. Awards to numerous to mention.

GRACE DARLING (Harris 1949)

So richly beautiful is the blending of soft rosy pink and white, that one is at once reminded of apple blossoms. The originator had at first planned giving the name of Apple Blossom to this beautiful glad, but was prevented from so doing as another glad bears that name. A tall grower, making up to 60 inches tall, opening 8 five inch florets on a 26 inch flowerhead, with 5 showing color. The florets are well attached with excellent texture. GRACE DARLING, being another Harris origination, bears the stamp of Quality.

FLORENCE NIGHTINGALE (Harris 47)

(Birchville Gardens is the headquarters for Florence Nightingale in the U. S.)

FLORENCE NIGHTINGALE is a marvelous glistening white, which is heavily petaled and ruffled. It is beautiful beyond description, for it has everything to be desired to make it so. It absolutely does not fleck. It grows 68 inches tall, with a 28 inch flowerhead. It opens 6 to 8 well-placed florets on a 21 bud spike. It has received top rating from trial gardens and growers. Growers will be interested in FLORENCE NIGHTINGALE, not only for its outstanding qualities, but also because of the absence of Picardy blood. This past season this was tried out in Florida and reports say it is the best white ever grown there; also a wonderful shipper. Will become the leading cut flower in a few years.

No doubt about it this is the most sensational early cut flower to date. A very early, clear, light pink with a white and cream throat. It will open 7 on a 32 inch flowerhead of 18 to 20 buds. The 5½ inch florets are well attached on a 58 inch spike which is always straight. SKYWAY received an Award of Merit and best 3 spikes at Connecticut, also Award of Merit at New York and "A" rating at New Jersey, all in 1948.

A medium shade of purple that has lots of class with its tall, graceful, wiry spikes. Eight wide open 4½ inch florets on a long flowerhead. A one hundred per cent cutter that stands the heat very well. It is a strong grower and good propagator, and is doing very well on the show bench. In 1948 I predicted this would go clear to the top as the leading cut flower purple. The demand has proven this.

FORMULAS FOR DIPS AND SPRAYS

LYSOL DIP

4 tablespoons of Lysol

3 gallons of water

or

1 pint of Lysol

25 gallons of water.

Soak bulbs in the Lysol solution for at least 3 hours and no longer than 6 hours; soak bulblets overnight or 12 to 14 hours. After bulbs or bulblets are removed from the solution, allow to drain for 30 minutes and plant same day as treated, preferably while still wet.

BICHLORIDE OF MERCURY

1 oz. Bichloride of Mercury

7 gallons of water

Soak 10 to 12 hours immediately preceding planting. Plant wet. Must be used in an earthen or wooden container.

NEW IMPROVED CERESAN DIP

1 ounce New Improved Ceresan

3 teaspoons measure Grasselli Sticker or 3 teaspoons Dreft

3 gallons water

To get a good preparation easily and quickly, mix the Ceresan and wetting agent together, add a little water at a time, and stir until a uniform mixture is obtained. DO NOT USE THE HANDS WHEN STIRRING. Soak bulbs in the solution 15 minutes, stirring several times during treatment; soak bulblets for 30 minutes. After bulbs or bulblets are removed from the solution, allow them to drain for about 30 minutes and plant IMMEDIATELY. A delay in planting can cause injury to the bulbs. If the ground is dry at planting time, I suggest the Lysol treatment instead of N.I.C. as dryness can cause a considerable delay in germination or growth besides possible injury to the bulbs.

THRIP SPRAY

2 ounces Tartar Emetic

2 ounces brown sugar

3 gallons water

Mix well and spray weekly after the foliage is in third leaf.

or

½ lb. DDT (50%)

½ pint liquid soap (Germicidal)

25 gallons of water

For small plantings the following DDT spray is reported as giving good results:

1 rounded teaspoonful DDT (50%)

½ teaspoonful Dreft

1 gallon water

DUSTING—The easiest and most efficient means of controlling Thrip is to dust the foliage of the plants with 5% D.D.T. Many types of dusters are available and one can be obtained to suit your size planting. Begin dusting when plants are in third leaf and continue about every two weeks. If this is done you can say goodbye to Thrip!

CAUTION: Bichloride of Mercury, Lysol, New Improved Ceresan, Tartar Emetic, and DDT are poisonous and care should be taken in handling and storing these materials.

CULTURAL HINTS

Packages of bulbs must be opened as soon as received and the bulbs stored in a cool, dry place until planting time.

PLANTING DATES. Any time from early Spring until the first of July. The blooming season can be prolonged until frost if planted at intervals of three weeks.

WHERE TO PLANT. Glads should be planted in open, sunny places, away from buildings and trees. They are primarily cut flowers and should be planted in rows such as a vegetable garden.

SOIL. Glads will grow in any kind of soil but do best in a sandy loam. The soil must be well drained. It pays to spade deeply.

FERTILIZING. The amount to use will depend upon the fertility of your soil. Any good commercial fertilizer will give good results or you can ask your dealer for the fertilizer commonly used on potatoes in your locality. Most growers prefer to place the fertilizer in the bottom of the trench as the bulbs are planted. Care must be taken to see that the fertilizer is mixed with the soil and then about 2 inches of soil placed over the mixture. The bulbs should then be set in the row, leaving the 2 inches of soil between them and the fertilizer.

DISINFECTING. All bulbs and bulblets should be dipped in a disinfectant in order to kill Thrip and to prevent possible disease infection on the bulbs. Nothing will cure bulbs affected with any of the rots. Bulbs showing rot should be discarded at once. (See formulas for Dips and Sprays.)

PLANTING. Plant from 3 to 6 inches deep. Small bulbs should be planted about 3 inches deep and larger sizes up to 6 inches deep. If you have a heavy clay soil 4 to 5 inches will be deep enough. The bulbs should be set not closer than 4 inches apart in the rows and the soil must be firmed well after planting.

WATERING. Glads need plenty of moisture. To produce top bloom they should have 1½ to 2 inches of water per week. Whenever the natural rainfall fails to supply this quantity be sure to put it on in the form of irrigation. It is best to water just once or twice a week, soaking the soil well, so that the roots are not pushing upward to the surface of the ground.

CUTTING BLOOMS. Glads are the most popular cut flower grown today. To enjoy them at their best the spikes should be cut when the first floret is in full bloom. They should be placed in water at once and taken indoors to develop slowly. You can enjoy a spike a long time as a good variety will open every bud to the tip, in water. If the water in the vase is changed daily and about an inch of the stem is cut off (slantwise) each day, many varieties will keep for as long as a week. When cutting the spike always leave 4 leaves on the plant to develop the bulb for the following year.

DIGGING. Bulbs should not be dug until about 6 weeks after blooming, in order to mature the bulbs. A good sign is to watch the foliage and when it begins to turn brown, dig at once. After the tops are cut off, close to the bulb, dry the bulbs in the air in trays or boxes. It is best not to allow the sun to shine directly on them while drying. After 2 or 3 weeks of drying the old bulb and roots can then be removed. DO NOT remove the husks as this protects the bulb during storage.

STORAGE. After drying, the bulbs should be stored in screen bottom trays or boxes in the coolest place available. They must not be exposed to freezing temperatures. The ideal storage temperature is 38 to 45 degrees. Bulbs should not be placed too deeply in the boxes as they need air while in storage.

When you get ready to store your bulbs, be sure to give them a light dusting of 5% D.D.T. This will eliminate any danger of thrips feeding on your bulbs during storage period. Glads are easy to grow and anyone, even a beginner, can grow the finest show flowers!
